

Senior Technical Architect

JOB DESCRIPTION

Are you passionate about large scale enterprise system development? Would you like to take part in the execution of a strategic shift towards a cloud-based offering of LogPoint's next-gen platform?

LogPoint is experiencing rapid growth globally and is investing massively in development of their modern Security Information and Event Management (SIEM) platform. They are successful all over Europe and have just entered into to the US market.

LogPoint is looking to deepen their engagement with their users and to innovate rapidly on the product experience. As Senior Technical Architect in LogPoint you will work with deep technical challenges, from designing new capabilities to launching entire new products and in that way work with both functional and non-functional requirements. With a strong focus on a shift from on-prem to cloud systems, you will report directly to the Head of Product Management and be tightly connected to engineering teams across three continents.

Your primary tasks and areas of responsibility:

- Partner and work collaboratively with people across Product, Engineering and Marketing teams to deliver complex, large-scale projects that are aligned with the overall strategic shift towards a high performing cloud-based offering
- Understand and meet the needs/concerns of various stakeholders - end users, partners, organizational leaders, to unblock and accelerate the overall cloud strategy
- Evaluate and provide guidance regarding new tools and technologies, create prototypes and proof of concepts

You must expect approximately 30 travel days a year visiting customers, partners and most importantly their fully owned subsidiary in Kathmandu in Nepal.

REQUIRED SKILLS AND EXPERIENCE

The ideal candidate is expected to have a technical education at BA or MA level, but experience from a similar role is more important.

- 5+ years of experience in software development, software architecture or technical product management
- Strong customer focus and a deep commitment to delivering products that create customer value and delightful experiences
- A track record of successfully leading large mission critical projects, cross company coordination and communication, and building large scale cloud services
- Experience designing complex highly available and scalable systems
- Experience with, and knowledge of Java, Python, Hadoop and Linux

COMPANY DESCRIPTION

LogPoint enables organizations to convert data into actionable intelligence, improving their cybersecurity posture and creating immediate business value. Their advanced modern SIEM, UEBA and Automation and Incident Response solutions, simple licensing model and market-leading support organization empowers their customers to build, manage and effectively transform their businesses.

LogPoint is a Scandinavian based software company that today has offices in Copenhagen (HQ), Stockholm, London, Paris, Munich and Boston – with partnerships all over the world. LogPoint currently has more than 750 customers and 50 certified partners in Europe and the USA and has over 200 employees in more than 10 countries.
